EDUCATION

Rutgers University – New Brunswick

New Brunswick, NJ

B.S. Computer Science, Minor in Critical Intelligence Studies | GPA: 3.4

Aug. 2024 – May 2027

- Relevant Coursework: **Software Methodology, Systems Programming, Data Structures, Computer Architecture**, Intro to Data Science

CUNY City College of New York

New York, NY

Dean's List – Fall 2023 & Spring 2024

Fall 2023 – May 2024

EXPERIENCE

Software Engineering Intern

July 2026 – Sept. 2026

Archly (Stealth Startup)

New York, NY

- Developed a **TypeScript web application** across a **React/Vite frontend**, Hono REST API on Cloudflare Workers, and PostgreSQL data layer using Drizzle ORM.
- Implemented session-based authentication and role-scoped workflows for students, firm members, and administrators in a two-sided marketplace.
- Used a **Git/GitHub Actions workflow** with linting, type checks, database and API tests, and Playwright end-to-end tests before deployment.
- Collaborated on feature development, debugging, code review, and maintenance as application requirements evolved.

Software Engineering Intern

July 2025 – Aug. 2025

Jasfel Analytics

Newark, NJ

- Built a modular **Python application pipeline** with Pandas and NumPy to ingest, transform, and validate **50,000+ U.S. Census Bureau records**.
- Implemented validation for missing, inconsistent, and duplicate data; documented reusable components and debugged issues as requirements changed.

PROJECTS

RUPlanner | [Live App](#) | [GitHub](#) | *Python, FastAPI, Next.js, TypeScript, PostgreSQL, Docker*

- Built and published a **full-stack Rutgers degree-planning web application** with course search, transcript-assisted onboarding, authentication, saved plans, and progress tracking.
- Developed a Python planning engine and **FastAPI/PostgreSQL services** that generate prerequisite-aware semester plans from degree requirements.
- Added scheduled catalog refreshes and course-availability polling; used **Docker** for reproducible development and deployment.

Clinical Lab & Patient Monitoring | [GitHub](#) | *Python, Flask, SQLite, TypeScript, React*

- Built a **Flask REST API** over a relational SQLite model and a React dashboard to display synthetic lab results, vital signs, medications, and trends.
- Kept measurement interpretation in one server-side engine with configurable reference ranges; exposed read-only FHIR R4 resources.

Mini Redis | [GitHub](#) | *Java, Maven, JUnit, TCP/IP*

- Built a concurrent TCP cache server with average **O(1) operations**, TTL expiration, LRU eviction, a bounded worker pool, and graceful shutdown.
- Wrote **JUnit stress and socket integration tests** for concurrency, expiration, eviction, and network behavior.

LEADERSHIP

Founder & President

Sept. 2024 – Present

Rutgers Run Club

New Brunswick, NJ

- Founded and grew a Rutgers student organization to **40+ active members**, organizing recurring activities and coordinating with campus stakeholders.
- Collaborated with students, communicated plans, and adjusted operations as the organization expanded.

TECHNICAL SKILLS

Languages & Formats: TypeScript, JavaScript, Python, Java, SQL, HTML, CSS, JSON

Web & Data: React, Vite, Next.js, Hono, FastAPI, Flask, REST APIs, PostgreSQL, SQLite, Drizzle ORM

Development Tools: Git, GitHub Actions, Docker, Playwright, JUnit, Maven, CI/CD, Cloudflare Workers
